All BV's quoted for animals born 2019 were taken from the A/H (across herds) run dated October 2021. Herd sire stags BV's quoted are from the A/H run dated October 2021. IOA (inches of antler) is a term now recognised as a measurement of live stags in hard antler, which is equivalent to the SCI scoring method.

Welcome

Welcome to our 13th annual South Island 2-year-old stag sale.

On the back of over 25 years of recorded Red Deer breeding at Wilkins Farming Co, we welcome your inspection of our 2019 born sale stags.

As an industry we continue to travel these uncharted times but we know like any challenge this time will ultimately help build resilience and diversity for future strength.

The performance of our breeding programme is quite staggering with 15 month European weight's up to 219 kg, EMA trace areas up to 48 cm which is the largest recorded in European red deer to the best of our knowledge, and loin weights of 8 kgs (7.87). The Maternals see combinations of 12 month EBV's up to +24, CDeBV -8.62, and EMA areas up to 44 cm. We have also been using new sires from velvet studs with impressive growth rates and velvet. These velvet traits are slowly coming through and delivering between 4 - 5.6 kg of velvet at 2 years for the top end animals.

This year's line-up of stags contains excellent animals and semen that present a good mix of our best Maternal and European Red Deer for breeding replacement hinds or advancing growth rate.

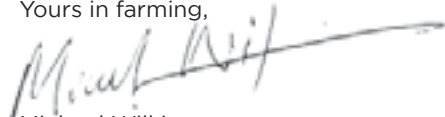

- **BIG DON (European) - FIRST SEASON SIRE** - A young European sire coming through with outstanding growth rate, meat yield potential and a great temperament. These genetics are a formidable way to improve venison weights. This is the first offering of Big Don progeny and sons up to 201 kg at 15 months we are sure they will not disappoint.
- **MORTLACH (European) - FIRST SEASON SIRE** - Another young European sire coming through with growth rate and meat yield potential. We have sons up to 219 kg at 15 months, and W12eBV's up to 28.92 in this offering. These genetics will most certainly improve venison weights. Like Big Don, this is the first year his progeny is offered for sale.
- **BIG GEOFF (Maternal - English Cross)** - This sire has certainly made his mark! After being used extensively upon his arrival, his sons have come through strongly after strategic mating with the exceptional WFC hinds. These animals are great for breeding your replacement hinds. Good growth and loin weights will see your venison production increase thanks to this exceptional progeny. Big Geoff also boasts an impressive CDeBV of -8.7 days.
- **MAPLE (Maternal-English) - FIRST SEASON SIRE** - A beautifully bred young sire that has been used within our herd. An impressive line-up in this catalogue out of Rock Me hinds combining growth and velvet. A very nice combination for breeding replacement hinds and all-round animals.
- **CHURCHILL (Maternal - English)** - This stalwart sire's dominance within our stud will be scaled back from the 2021/2022 sale season. This year will therefore be one of your last chances to buy numbers of sons from this proven Maternal sire. In addition, we have a couple of exciting combinations of Churchill and Tui crosses, which have +20 W12eBV's and -7.22 on CDeBV - an exceptional combination for improving performance within your breeding of replacement hinds.
- **SEMEN** - We will be offering a limited quantity of semen by some of our now deceased but industry greats, Maximilian, Rock Me and Infinity. There will also be semen on offer from current sires Cleomenes, an outstanding clean beamed high scoring trophy and Maple, an impressive English with excellent growth and velvet traits.

This year you will have the opportunity to participate remotely through BIDR in conjunction with PGGW so you will have the option to bid in real time remotely via this online auction platform. More info in the catalogue. (Page 6 & 7) Our on farm auction will be conducted as per the covid restrictions at the time of sale - please keep an eye on our website for any updates regarding this.

Please note once again we have made the decision to organise the freight on account of the purchaser, unless specifically requested otherwise. This is to minimise the risk of injury to your purchase/s by reducing the number of yarding's.

Should you have any questions, please do not hesitate to contact one of us.

Yours in farming,

Michael Wilkins
Wilkins Farming Co

PLEASE BRING THIS CATALOGUE WITH YOU ON THE DAY.

History & Vision

We have been breeding deer for over five decades.

Our original bloodlines were sourced in the 1980's and 1990's and are based mainly on King Richard, a recognised champion sire, from Festl Park in Germany. We then crossed these German genetics with Fredrich to introduce Hungarian bloodlines to further enhance the venison growth rates and velvet production in our hind base. Our stud started recording pedigrees by tagging our first fawns at birth from November 1995.

In 2001 we initiated our first AI (Artificial Insemination) Programme, to introduce genetics from best in class sires. In addition, in 2004 we undertook our first Embryo Transfer (ET) Programme, identifying and multiplying the best genetics from our herd.

In 2008 we purchased the Stanfield Eastern European Red Deer stud, to strategically add substantial venison and antler enrichment to our breeding programme.

To add further venison depth to our hind base we then purchased the Doncaster Red Deer herd in 2012.

In 2015, in conjunction with Mt Hutt Station, we travelled throughout Europe and England to hand select World Leading Red Deer. After purchasing a number of stags, they were consolidated to England for further farming, where semen collection was undertaken for shipment back to our home farm in New Zealand.

Further, in 2018 we purchased the finest Woburn New Zealand herd, from Henrietta Dowager Duchess of Bedford. The stunning herd was originally sourced from the family's English Estate, one of the oldest managed deer herds in the world, dating back 100's of years.

As indicated by this brief historical insight, our dedication and investment (and that of other breeders whose herds we have purchased), is illustrative of our commitment to both the industry, and more specifically the ongoing development of our hind base.

Vision

Our aim is to produce a high value animal with a venison focus, from an efficient maternal weight hind using the latest technology and best genetics available.

To achieve this, we use world leading genetics and combine them with performance measures such as ultrasound scanning, CT scanning, DEERSelect, progeny testing and DNA testing.

Through recording key trait data, it is easier to mate the right hind to the appropriate stag to achieve specific breeding goals. During the selection process, we are constantly reviewing breed values, bloodlines and performance to date.

Our venison breeding programme employs the following foundations;

1. An **average adult hind body weight of 118+ kg**, which assists in creating satisfactory breeding efficiency. (This enables us to get this hinds progeny to the high value early spring market)
2. An **animal with a high carcass yield**, that also has an increased percentage of more valuable meat cuts, in order to deliver higher returns.
3. **Temperament, fertility, constitution, type and then calving date** are our key measures for successful breeding.
4. A **strong velvet base** delivers diversity and potential income over and above venison.

Genomic Opportunities for NZ Deer

For 25+ years GenomNZ has been conducting parentage analysis for the NZ Deer Industry. We offer a SNP based parentage test, containing tens of thousands of markers providing a more accurate parentage assignment.

This sequencing method provides precise genomic relationships and breed composition, as well as parentage analysis.

Ear tissue punches are our preferred sampling method (Allflex TSU). This sample type has been shown to provide both higher quality DNA as well as potential on-farm benefits.

ALI

Shown at 3 years
Maternal - English Cross

ALI
BR 864/15

2yo velvet

4yo velvet

Ali is an outstanding all-round English stag, with strong venison and velvet credentials.

Bred by Brock deer, Ali is sired by Parker out of a Cadillac hind, and was purchased by Wilkins Farming Co in 2018.

His 2 year weight of 216 kg, combined with 6 kg of velvet bodes well for the future of this stag within our Maternal breeding programmes.

In 2018, Ali won the Overall People's Choice Award at the Rising Stars velvet and hard antler competition. We are excited to see how his velvet and venison production develops with age.

BIG GEOFF
PFE 596/14

Shown at 3 years

Big Geoff is an imposing stag within the herd. Although, we only purchased him in 2017, we are looking forward to his growth and velvet attributes coming to fruition.

Sired by Jefferson out of a general hind, Big Geoff is 1/2 English, 1/4 German and 1/4 European.

Big Geoff is appropriately named, given his impressive live weights of 249 kg at 3 years (sale day) and his W12eBV of 15.2 which is solid for this breed type.

As shown below, his impressive SA2 velvet at 3 years was 7.2 kg and he cut an additional 4 kg of regrowth. A massive total of 11.3 kg of velvet at 3 years of age.

Big Geoff is a well performing sire with a great nature.

Shown at 3 years

STANFIELD

Cardrona's sire 403 — Shown at 6 years

Cardrona is rated as one of our top sires. He delivers top growth rates and awesome velvet.

Sired by John Scurr's 403 (a stag with serious trophy traits and wow factor), Cardrona was bred at Netherdale from an English hind.

As indicated below, aged 3 years (sale day) Cardrona weighed 258 kg and cut an impressive 6.2 kg of SA2 velvet. As at October 2021, his W12eBV result of 9.2 is solid for this type.

Cardrona remains a strong and influential part of our herd, and his dominance in our breeding programme continues to be significant with good body, great nature and very clean beamed traditional velvet.

CHURCHILL

Shown at 5 years
Maternal - English

Shown at 2 years

Shown at 2 years

Churchill – a pure English sire whose growth rate is exceptional.

He was sired by Dartagnion, out of an Andrew III hind. Pure English, Warnham bloodlines. He was a massive English stag, with the largest 15 and 18 month live weights Stanfield have produced for this type.

As indicated below, as at October 2021, Churchill's W12eBV was +17.2, with an accuracy of 99% and 567 recorded progeny. We are very pleased that Churchill is ranked No. 1 for W12eBV, and has been for 9 years (English sire summaries DEERSelect)

A key member of our stag team through AI, Churchill's reliability delivers progeny with exceptional growth rates and consistent velvet credentials.

DECEASED	2018			

MAPLE

Shown at 3 years
English Cross

Shown at 3 years

Maple was purchased from Brock deer in January 2019. Sired by Parker out of an Everest hind, this stag combines some really exciting velvet and growth rate genetics.

He had a notable live weight at weaning in April of 83 kg and his velvet head has incredible beam and tops, Maple cut an impressive 6.7 kg of SA2 at 2 years. He has a deep red coat colour, an impressive body, temperament.

We are looking forward to breeding from this stag strategically for both body and velvet, from his 1st drop of progeny we have seen exceptional body and velvet coming through at Wilkins and Brock Deer.

Sire : Rock Me

Sired by our impressive Rock Me out of a Megamilian hind with strong German influence.

His massive weaning weight of 81 kg and then growth rate to achieve 165 kg at 15 months is exceptional (for this type), as is his deep thickset body.

As a 2 year old Megarock cut a respectable 4.8 kg of SA2 velvet, combined with a W12eBV of 10.30 as shown in the table below. This stag is an excellent all-rounder with such a strong English/German mix, and is used in our maternal breeding programme

Peel is an English German cross with a solid W12eBV and top velvet genetics.

Purchased from Peel Forest in 2011 and appropriately named Peel, this stag offers many valuable traits. Of note in the table below is his W12eBV combined with his solid velvet weights.

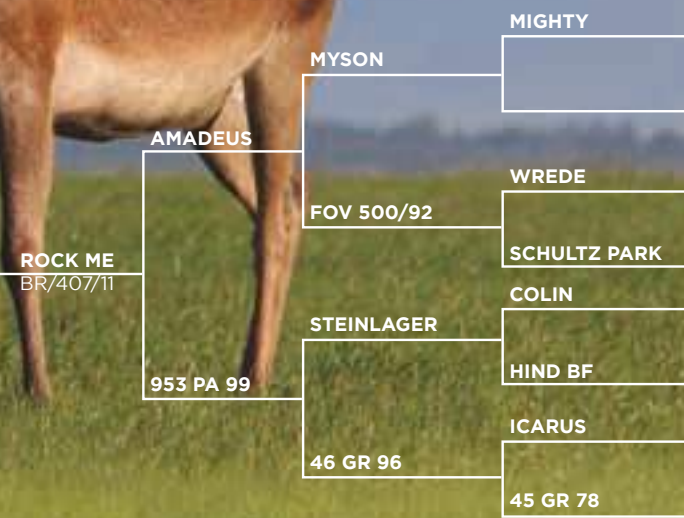

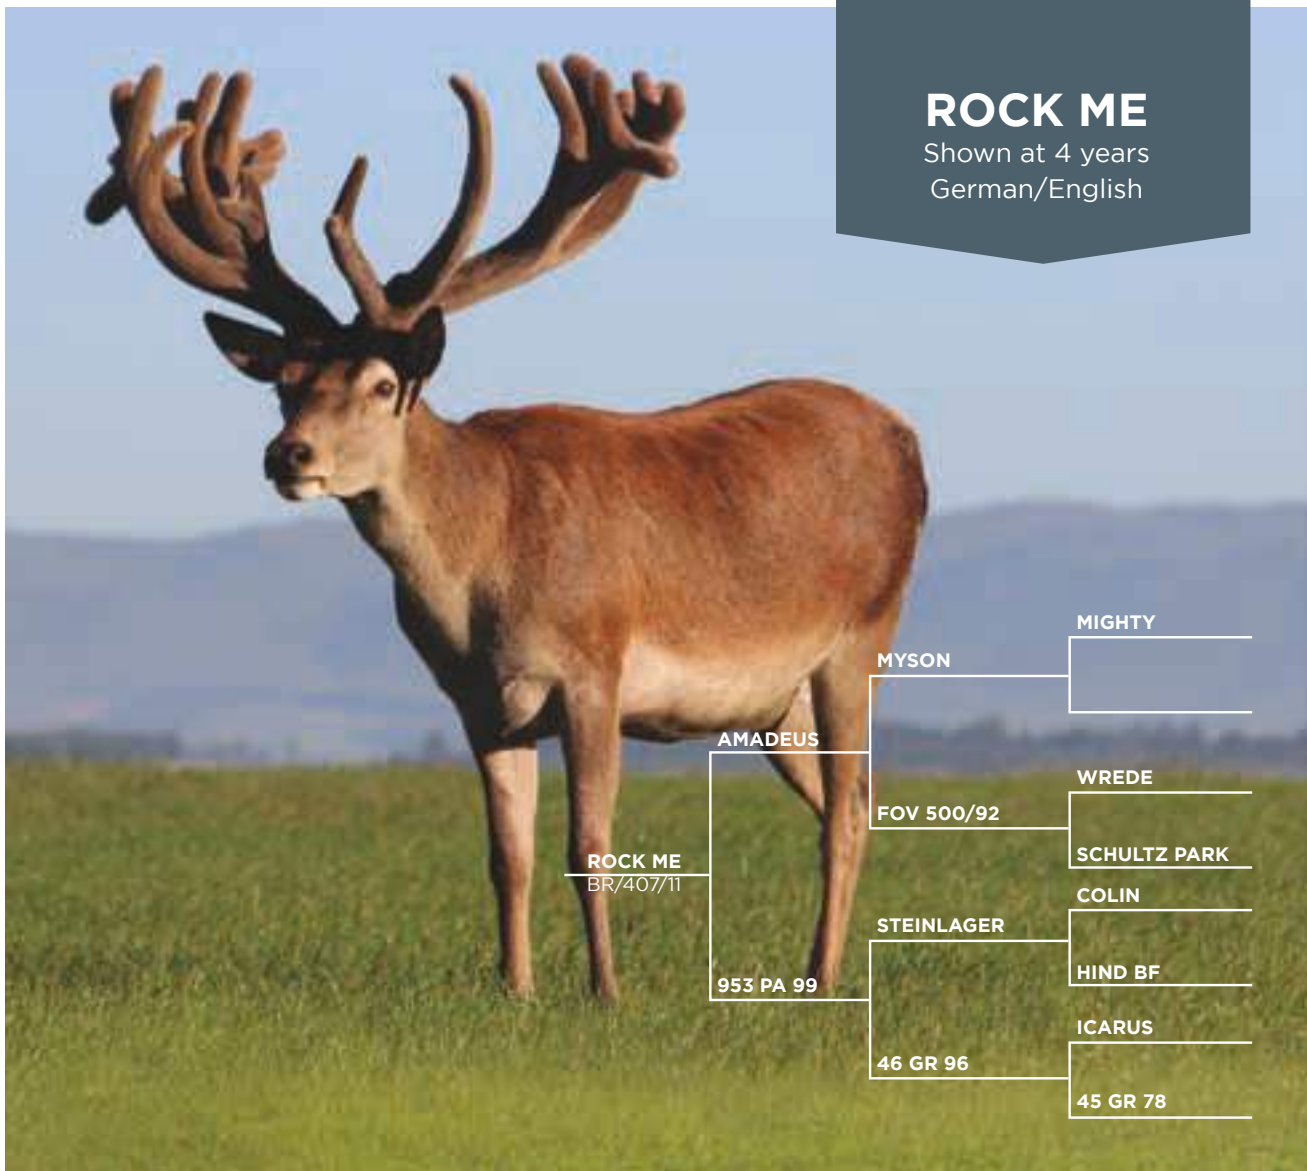

We are pleased Peel's progeny continue to inherit his high growth rate and strong velvet credentials.

If you're looking for a top all round maternal sire we highly recommend Peel.

ROCK ME

Shown at 4 years
German/English

Shown at 2 years

Shown at 3 years

Rock Me has it all. He is an impressive stag that delivers well on all key traits.

He is sired by Amadeus, a Pure German who was bred by Foveran. Foveran described Amadeus as “the most amazing 2-year-old stag ever produced”. Rock Me’s dam is sired by Steinlager, bred by Black Forest and goes back to Colin who is a Festl Park German Sire. All in all this impressive breeding delivers a 7/8th German/English.

Impressive growth rates achieved which are rarely seen for this type. 148 kg at 15 months of age, and 244 kg at 2 years (sale day). These factors influenced our purchase of this stag from Brock Deer, and as at October 2021 Rock Me’s W12eBV was +8.4.

In addition, Rock Me offers outstanding antler, as you will see from the photos and data below. For example, at 2 years his velvet was estimated to be in excess of 6 kg. In December 2014 Rock Me cut an impressive 3 year old head of 14.8 kg OG velvet, along with 20 kg of OG velvet as a 4 year old.

Rock Me’s influence within our European and Maternal breeding programme cannot be underestimated with some of our best bodied and velvet antler animals sired by Rock Me.

DECEASED	2015			

BIG DON

Shown at 2 years
European

Big Don was retained by Wilkins Farming from our 2016 born progeny. This stag has tremendous depth to his pedigree dominated by Doncaster breeding.

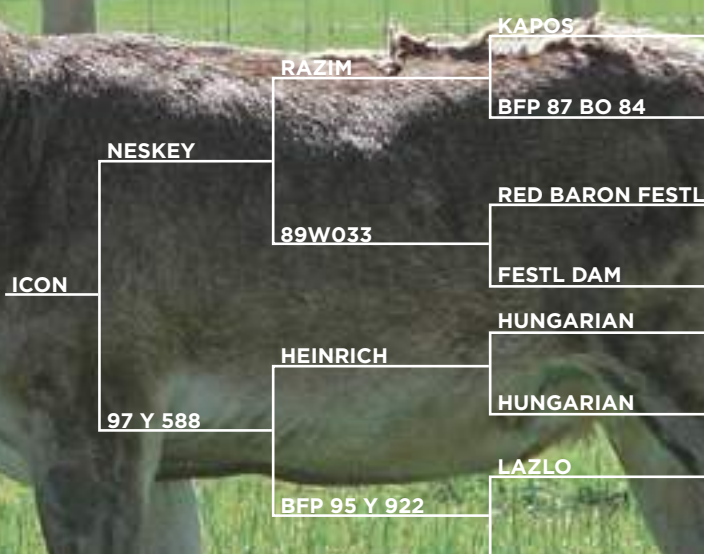

Big Don was bred from some of our very best genetics. This stag has exceptional growth rates and a 2 year sale day live weight of 280 kg. His W12eBV of 23.2, eye muscle of 35.35 and estimated loin weight of 4.85, sees Big Don as a serious venison producer. His CT scanning results are extremely impressive reinforcing his venison traits, scanning NO. 1 for the 3 key measures of loin weight, lean/CWT, and yield/LWT percentage.

He boasts a tremendously thickset body and is extremely quiet in nature which can be seen in his sons.

ICON

Shown at 5 years
European

Shown at 7 years - 9.6 kg SA2

Icon has been used within our herd as an AI sire. He is a proven sire for growth rate and velvet, however Icon caught our attention due to his performance in the DPT (deer progeny testing) project. Icon was NO. 1 for EMA (eye muscle area) and tenderness when taste tests were done.

We have been using him strategically within our herd to enhance our EMA, meat yield and loin size which in turn will enhance flavour.

We are thrilled with the progeny this stag is producing and in particular the EMA results and the gains we have achieved in our meat yield assessments. Our recent EMA and loin size progress has been very pleasing.

MORTLACH
MFCF-16-093

LOCHINVAR

LILYBANK

MFCF 397/12

GEMINI

MFCF 609/14

MFCF 451/12

Mortlach is an exciting European stag with strong venison credentials.

This stag is sired by Lochinvar out of a Gemini hind, and was purchased by Wilkins Farming Co in 2019.

As shown in the table Mortlach has sound growth rates achieving 86.5 kg at weaning. The solid growth rates are backed by his W12eBV of 27.6.

We are anticipating excellent performance from this promising European sire.

TUI

Shown at 4 years
European

Tui is an exciting venison stag, who excels in both growth rate and conception date measures.

He is sired by Corona who goes back to Alexei. His dam WF 127/05 is a full sister to our super sire WF 144/05 (bred through one of our ET programs.) It should be noted that the hinds in Tui's pedigree have excellent performance and are second to none in our herd.

He has an outstanding temperament, an attribute we are pleased his progeny are inheriting, along with strong growth rates.

As at October 2021, his W12eBV was +19.9 as highlighted in the table to the right. Tui has an exceptional CDeBV (conception date) at -8.7 days, which is an extremely valuable trait when trying to bring forward your fawning dates.

As you can see Tui's key traits can only but enhance your venison production through conception date and growth rate.

VOVA

Shown at 2 years
Eastern

Shown at 5 years

60/17 sired by Vova

Vova is an eye catching Eastern stag with outstanding antler and solid body weights.

He was bred by Wilkins Farming Co and retained from our 2013 crop. As shown above his pedigree originates from our stalwart sires Vladimir and Heinrich.

As a 2 year old Vova grew an impressive well balanced multi-point antler, and had a significant live weight of 247 kg. Vova is performing well as a sire including son's like 60/17, the top priced Eastern stag at our North Island sale in 2019.

WF

WF 144/05 is one of our stalwart sires, offering exceptional growth rates, yield and hardiness.

Sired by Maximilian, out of WF 34/03, one of our best dams for breeding efficiency.

Ranked No. 1 for our born 2005 progeny for loin and carcass indexes, WF 144/05 continues to deliver well on all key performance measures.

As at October 2021, WF 144/05 had a current W12eBV of +19, with a 99% accuracy from 756 recorded progeny.

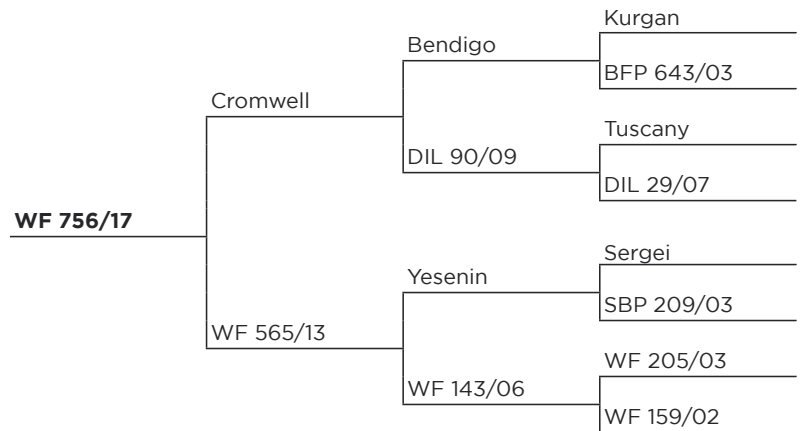

WF 144/05 is an ideal multipurpose sire for breeding replacement hinds with strong maternal traits, as well as high growth rates for venison production. He has great conformation, and we are continually impressed with his constitution through, and after the roar.

Here's a big stag with an extreme growth rate, 84 kg wean through to 189 kg at 15 months. Big estimated loin and eye muscle area (EMA) to boot. Weaned 63% breeding efficiency. Sold at our South.

EDWARD

English

Used via AI, Edward was an English stag ranked NO. 2 for growth on DEERSelects English sire list. He offers good growth rate with nice velvet. We have used this stag strategically over our Churchill hinds.

Jameson is an exciting venison stag with outstanding growth rate.

Used by Wilkins Farming Co as a spiker, Jameson is sired by Mortlach out of a hind containing some of our very best European bloodlines.

Jameson scanned NO.1 for Eye Muscle Area (EMA) 48.51 at ultrasound scanning, and his impressive weights demonstrate unrivalled growth i.e.: 86 kg at weaning and a huge 219 kg at 15 months. At this time we understand these measures for growth and EMA are the highest numbers ever recorded for these traits in European red deer.

Jameson is 41 kg heavier than our previous heaviest animal at 15 months of age. It is worth noting that in our 2019 born we had a number beat the previous record, but Jameson is also 18 kg ahead of his peers.

His key traits are sure to further enhance your venison production. We eagerly await his impact within our breeding programmes and his continued performance as he matures.

INFINITY

Shown at 6 years
Maternal - English German cross

Shown at 6 years

Infinity is an impressive English/German stag featuring outstanding antler attributes.

He is sired by William John out of a Wredeson hind. Wilkins Farming Co purchased his dam FOV 3996/03 while in calf from the Foveran hind sale, and Infinity was her resulting progeny. The incredible depth to his pedigree is testament to the stag he grew into.

At 5 years of age Infinity achieved an outstanding 612 inches of antler as highlighted in the table below.

We are continuing to breed strategically via AI with Infinity over our English/German hind base and are continually impressed by the progeny he leaves.

MAXIMILIAN

Shown at 7 years
Pure Eastern

MAXIMILIAN

This super sire has changed the face of Eastern breeding. A spectacular 392 kg at 6 years with 13.1 kg H/A. His first crop of sons were up to 256 kg, antler spread 46 inch, antler weight 9.05 kg with prices up to \$53,000.

Of all the Eastern sires Stanfields have bred with since 1984 Maximilian is indisputably No. 1. He is the sire that features most prominently in all pedigrees of Deer Select sires. And has produced 2 year sires with sale day weights up to 262 kg. We still breed strategically with Maximilian by AI with limited semen stocks we still maintain.

No 1. EBV 2 year old at Stanfields 2006 stag sale with a huge body. He was an amazing 262 kg at 2 years which at the time of purchase was quoted as a world record.

Super quiet and thick set stag with good deep body conformation as you can see here.

He has a large number of progeny (519) across a number of herds which gives us confidence in the accuracy of his current BV.

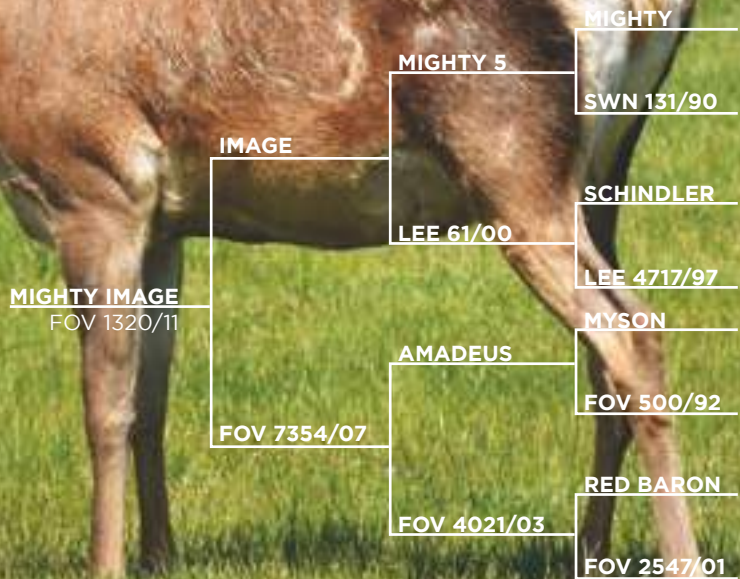

This stag has a current W12eBV of +17.6.

Vladimir is one of our stalwart sires in our Eastern stag base. Combined with top growth rates and outstanding velvet this stag delivers on all key traits.

By Sergei out of a Maximilian daughter, Vladimir originally from Stanfield stud contains some of the best Eastern genetics available.

As a 4 year old, Vladimir grew an impressive head of hard antler - 42" long with a span of 32". His velvet head is also very correct and cut over 9 kg as a mixed aged stag (see table below)

Combined with top growth rates and outstanding velvet this stag delivers on all key traits.

European

WF 334/11 is a star European stag for our born 2011 progeny with respect to venison production.

Sired by our stalwart sire WF 144/05 bred from a Doncaster hind, WF 334/11 was the heaviest 11 month stag at 146.5 kg, and a massive 188 kg at 15 months.

As shown in the table on the right, WF 334/11 not only returned a W12eBV of +21.7 in October 2021, but is also ranked in the top 5 for every other trait in our born 2011 progeny.

In 2019 WF 334/11 was the sire of impressive two year old stags with excellent natures and weights up to 278 kg.

WF 334/11 is following in the footsteps of his father, WF 144/05 as an all-round super star stag.

Yesenin is an exceptional meat producing stag as well as providing strong velvet and antler credentials.

He was purchased from Stanfield stud and has provided a solid base for much of our hind herd. Yesenin has excellent constitution combined with solid body weights.

An all-purpose stag, Yesenin provides strong velvet credentials and as a 5 year old he produced a 24-point head

We are extremely pleased with his progeny to date. Yesenin is a serious contender as a sire of progeny for those looking to produce venison.

Purchased from Netherdale, this stag caught our eye with his good growth rates and solid velvet weights.

At 3 years of age Brooklyn had an impressive sale day weight of 268 kg combined with a great nature.

He is sired by Harlem who was the National velvet champion as a 5 year old, as well as a producer of standout live weights within the Netherdale Stud.

Brooklyn is set to make an impact within our maternal herd and we eagerly await his progeny.

Purchased from Crowley Deer for his impressive antler and body weights at 2 and 3 years.

Cleveland is sired by Rockafella, a renowned trophy sire thanks to his exceptionally wide, long, and heavy multi-pointed antler.

We hand selected Cleveland for his outstanding symmetrical antler that boasts very clean tynes and a thick beam.

This is a young sire who we expect will have a serious impact within our herd, thanks to his outstanding mix of velvet and antler quality, combined with a good body weight.

Cleomenes was purchased by Wilkins Farming Co given his impressive antler combined with solid body weight.

Cleomenes possesses extremely eye catching clean antler that has massive main beam length, outward flowing T4s and strong clean lower tynes.

In 2019 Cleomenes won the National Rising Stars Velvet and Hard Antler Competition's 'People's Choice' award for his picturesque trophy styled head.

Cleomenes will be a key stag within our Trophy/Velvet herd. He possesses a solid body weight, good trophy potential and when crossed with the likes of our Infinity, Cardrona and Rock Me hinds we anticipate outstanding results – a good mix for both velvet and trophy.

KÖRPER

Shown at 2 years
Maternal

Bred by Wilkins Farming, Körper is one of our standout 2017 born progeny.

This impressive stag was sired by Rock Me going back to WF 350/94 Red, one of our best hinds for breeding longevity and breeding efficiency. Körper is stacked with proven performance, massive growth rates and a solid meat yield. He also boasts an excellent body conformation, combined with a very quiet nature.

We are excited by the depth of breeding in his pedigree which will further enhance our maternal breeding programme.

Management Tools

Definitions

W12eBV – the estimated breeding value (EBV) for weight at 12 months of age (yearling weight) expressed in kilograms (kg) of live weight.

EMAcceBV – the estimated breed value for eye muscle area (size of the muscle/meat on the ribs as measured by ultrasound scanning). The “c” very importantly stands for carcass weight corrected meaning you can select animals with more loin muscle area for their carcass weight.

CDeBV – the estimated breeding value for conception date, it is expressed in days. It is currently the only EBV for reproduction. Unlike many EBV a negative value is better, meaning hinds will calve earlier.

Estimated loin weight - Eye muscle area x the length of the loin muscle to give an estimated meat weight of the muscle measured in kilograms (kgs).

EMA - (Eye muscle area) – the area of the traced eye muscle (loin) over the 12th rib using ultrasound scanning.

DEERSelect

DEERSelect provides genetic evaluations for the deer industry. Evaluations are completed six times a year using all information in all connected herds to estimate genetic merit for individuals.

An estimate of the genetic merit of an individual for a trait relative to the average merit of all animals in the base year is called a breeding value.

The breeding values are based on the performance of an individual and all known relatives. Breeding values are corrected for environmental factors, such as mob, age of dam, sex and differences between seasons. As more information is collected the breeding values are updated.

Breeding values are expressed in the same unit as they are measured. For growth and velvet they are in kilograms and for conception date they are in days.

Genetic progress in 12 month weight Breeding Value across all DEERSelect herds over the last 20 years.

Scanning for Meat Yield

WILKINS FARMING CO IN CONJUNCTION WITH NEVILLE JOPSON (ABACUS BIO)

The initial focus of the Wilkins Farming Co genetic improvement programmes for venison production was on improving growth rates, for the several years weight of meat recovered from a carcass has also been measured and improved.

High growth rate animals achieve slaughter weights at an earlier age compared to low growth rate animals, an important aspect in running an efficient venison operation. Improving the weight of meat recovered from a carcass is also very important.

Wilkins Farming Co have been using CT and ultrasound scanning to “look inside” the body of an animal. Both CT and ultrasound are human medical technologies that have been adapted for livestock.

- Ultrasound scanning is used to measure the eye muscle area (EMA), which indicates meat production. We scan approximately 300 of our hinds per year with this technology to ensure improvements of this key trait.
- CT scanning provides a very effective measurement of the meat and fat within the carcass. CT measurements are as effective as slaughtering then dissecting out the meat from the fat and bone in the carcass, however this way the stag is still alive and can be used in our breeding programme. Due to the expense of CT scanning only a small number of stags are scanned each year – these stags are selected based on their sire and performance data.

The measurements from CT and EMA scanning are also entered into DEERselect where BV's (breeding values) for performance are derived giving buyers the confidence that the animals purchased are an asset to their herd.

Using the aforementioned technologies, Wilkins Farming Co are advancing with our venison production through better carcass yields, as well as further enhancing the sale stags we offer to the market.

Scanning loin depth

Eastern

WHY EASTERN?

Our Eastern deer are bred specifically for venison and velvet production. Our Eastern stud contains incredible depth with 30 years of selective breeding in New Zealand.

The key Eastern attributes we look for are:

1. High growth rate – Easterns are the largest type of Red deer and size is an important attribute.
2. Early conception - Easterns mate earlier therefore calve earlier.
3. Clean heavy beamed velvet and antler combined with length and width in beam that is not commonly seen in other Red Deer. Seldom do you see snags and bifurcations.
4. Good temperament.
5. Type of animal i.e. good body conformation and type.

As shown below Vladimir clearly demonstrates the key attributes we strive for in our Eastern animals.

Vladimir shown at 7 years.

European

WHY EUROPEAN?

Our European Red Deer are bred specifically for venison production, while some can also be used for both Terminal and Maternal breeding programmes depending on particular bloodlines and objectives.

The key European Red Deer attributes we look for are:

1. High growth rate.
2. Good meat yield i.e. loin size and meat to bone ratios.
3. Type of animal i.e. good body conformation and constitution.
4. Good temperament.
5. High fertility.
6. Velvet production.

As shown below WF 144/05 demonstrates a perfect mix of all of the key European traits. View his profile on page 29.

WF 144/05 shown at 4 years.

Maternal

WHY MATERNAL?

Maternal Red Deer are bred specifically as replacement hinds.

Maternal sires are a great solution to introduce to a European herd to stabilise by introducing the hardier influences from English and German traits.

The key Maternal attributes we look for are:

1. Good growth rates.
2. Breeding efficiency including milking ability.
3. Hardiness.
4. Good meat yield i.e. loin size and meat to bone ratios.
5. Type of animal i.e. good body conformation and constitution.
6. Good temperament.
7. High fertility.
8. Velvet production.

As shown Churchill in his profile (page 19), is New Zealand's most proven Maternal Sire (Number One for English Sire growth rate for 7 years).

Churchill shown at 5 years.

Keep calm in the shed

**For quieter, calmer, stress-free days in the shed,
make the change to quality deer matting.**

Anti-slip, non-abrasive, soft on the hoof and quiet underfoot, our durable matting ensures deer are calm and easy to handle. For healthy deer and healthy returns, trust Numat matting.

"Numat has been in our sheds for a number of years. It provides a quieter environment for deer handling, minimises injury, and is easy to clean. We have no hesitation in endorsing Numat."

Conditions of Sale

Special Conditions

No animals, embryos or semen sold by Wilkins Farming Co or their germplasm, any subsequent progeny or germplasm, including the semen and germplasm of that progeny may be supplied to any third party without the express written permission of Wilkins Farming Co.

Conditions of Sale

1. The sale will be conducted by PGG Wrightson with the conditions of sale as set down by the Stock and Stations Agents Association, a copy of which is exhibited in the office on sale day.
2. Each lot becomes the purchaser's property and risk at the fall of the hammer.
3. Warranties and Insurance are covered under separate headings.
4. Terms are strictly cash unless prior arrangements are made with the auctioneers. Accounts not paid within 14 days of sale shall bear interest, at current rate per annum from the date of sale.
5. The sale is conducted exclusive of GST.
6. A buyers commission of 4% is payable to non-participating companies and recognised independent agents introducing and accompanying purchasers to the sale providing prior arrangements [No later than 24 hours prior to sale] are made with PGG Wrightson.
7. Intending purchasers are required to register with the auctioneers prior to the commencement of the sale.
8. Antler will be cut after sale and remain property of vendor unless advised differently by purchaser on sale day.
9. All sale stags have passed Johnes testing.
10. Wilkins Farming Co Breeding Herds have been TB tested clear and carry C10 plus status.
11. Wilkins Farming Co will stand by their stag's performance, though the vendor makes no guarantees.
12. Wilkins Farming Co and our employees accept no responsibility for any errors occurring within this catalogue.
13. Wilkins Farming Co will organise the freight on account of the purchaser unless requested otherwise

HOST FARM

WILKINS FARMING. 65 HARVEY ROAD, ATHOL

NOTE: The deer have been bred between the two breeding units, Sharrow Downs, Wendonside and Harvey Road, Athol. All stock are amalgamated as weaners at Sharrow Downs until 2 years of age before being relocated on sale day to the Harvey Road, Athol property. This is due to the inability to display the complete sale line-up in the deer facility at Sharrow Downs.

Distance From Invercargill — Approx 110km • From Queenstown - Approx 78km
