Balaton's 7 year antler

Balaton is an exciting addition to the Wilkins Farming Co artificial insemination herd. Sourced in conjunction with Bruce Hood from Mt Hutt.

This stag bred by the Kaposvar University caught our attention because of his impressive body and antler traits. His length and depth of antler are evident in the photos shown of this stag combined with an impressive 28 point head.

Balaton has been imported for use within our Eastern herd via AI (artificial insemination)

Introducing Balaton's genetics to our current Eastern hind base gives us a new outcross ensuring expansion to our Eastern stud genetics.
